

ER-A280F

COMPACT, STYLISH AND FEATURE RICH

The ER-A280F is powerful enough to manage your hospitality business.

- Compact, space saving and stylish design
- Powerful functionality
- Large and bright multi-line operator display
- Numerous RS232 ports to allow for system expansion

ER-A280F

DESIGN

The compact and space saving design of the ER-A280F allows for counter space to be maximised. The stylish black contemporary colour scheme fits into the most demanding and design conscious environments.

FLEXIBLE POSITIONING

The ER-A280F can be positioned centrally on the included cash drawer or off-set to the left which will allow other peripheral devices such as scanners to be neatly stowed directly next to the cash register.

EASE-OF-USE

The ER-A280F includes a flat and spillproof keyboard with 70 responsive touch keys which allows for a large number of items to be laid out in an orderly manner. With an optional back office software package, the keyboard layout can be customised to suit your preferred way of working. To reduce the amount of excessive lighting glare, the material and design of the rubber keyboard cover has been improved.

FIXING BRACKET

Although the ER-A280F sits firmly and securely on four rubber feet, a useful angle fixing bracket is also included which allows for the cash register to be secured to the countertop. This is useful for space restricted environments as it prevents excessive movement each time the cash drawer is opened and closed.

Scanning

For fast customer service, the ER-A280F allows for a scanner connection and a number of common barcode formats are also supported. This allows the operator to register items with just one scan and it removes the possibility of any potential costly keying-in errors. The ER-A280F also allows for price enquiries to be used with the scanner thus giving fast and efficient customer service.

Reliable printing

A fast and silent single station thermal printer is included as standard with the ER-A280F. Printing out at an average of 15 lines per second it enables fast customer service as receipts can be produced quickly.

The use of a high quality printer allows for clear and professional looking receipts which can be customised to suit your business with specific messages or graphic logos. To suit a wide variety of business requirements, a number of receipt formats can be set.

To save time during busy trading periods, the printer has been designed for drop-in paper loading which allows for paper rolls to be changed easily.

Promotions

Usually associated with much higher specification cash register models, the promotional capabilities of the ER-A280F are second to none. This easy to program promotions function allows for selling opportunities to be maximised and it has the capability of handling a number of different offers.

Promotions can be tailored to give an amount discount or percentage discount if a certain number of items have been purchased. Furthermore, to show customers how good value their purchases have been, a customisable text description is printed onto the receipt indicating the saving made.

Manage your staff

The ER-A280F supports up to 99 clerks so managing your staff is never easier. For hospitality clients, the flexible overlapped clerk system allows for quick customer service and faster customer turnaround during busy periods. To help familiarise new employees with the functions of the Electronic Cash Register and help reduce mistakes a useful training function is included that allows clerks to learn how to use the cash register without affecting the sales totalisers.

Manage cash effectively

Any business needs to keep track of all cash movements and with the PO (Paid Out) and RA (Received on Account) keys, the ER-A280F allows you to track cash that has been taken out or put in to the cash drawer. The Electronic Journal function can store up to 9,000 lines of transaction data securely and this helps to save paper and reduce costs for those who do not need to have a print out of every transaction. To help give quick responses to any customer queries, the Electronic Journal view function also displays the transaction data on screen.

Management control

All managers need to be able to control how the cash register is used to enable accurate trading. The Manager Mode means that the cash register can be programmed so that clerks only have access to the functions and information that is required for their jobs. A password protect feature helps give enhanced security and the ER-A280F also comes with a secure lockable cash drawer to keep all monies safe.

Any busy hospitality environment needs to ensure constant compliance with statutory regulations and the simple age verification feature helps to remind clerks that it is their responsibility to confirm a customer's age on certain products such as alcohol.

Guest tracking

The integrated guest tracking system on the ER-A280F is ideal for cafes, diners or small pubs that want to keep a accurate tab of table spend and ensure that any order entry mistakes are minimised. A maximum number of 99 GLUs (Guest Look-Ups) can be set and the system is flexible enough to allow for tables to be laid away and recalled when extra items need to be added or if the customer is requesting the bill.

STREAMLINE ROUTINE TASKS

The ER-A280F supports up to 10 auto keys which means that routine tasks that require a certain number of key presses can be simplified and reduced to one button press. For example, end of day reports and tender amounts for large bills. This useful time saving feature is ideal for any hospitality user.

LOCKABLE CASH DRAWER

The compact cash drawer has been designed to be flexible enough to hold a large number of notes and coins. The cash drawer is not only sturdy and tough but it also lockable when security is a prime concern.

FLEXIBLE VAT AND TAX

With up to 6 tax rates, the ER-A280F is flexible enough to cope with most hospitality demands when certain items have different VAT rates for eat-in or for takeaway.

BACK OFFICE SOFTWARE

A dedicated back office software solution allows you to get more out of your ER-A280F Electronic Cash Register. Programming functions for items (PLUs), barcodes, currency rates and departments can be managed from a separate back office computer. A task scheduling system is also available which enables ECR reports and downloads to be taken at specific times and on specific days.

For full management control, a benefit of a back office software solution is that it allows a wide variety of reports to be accessed and printed on A4 printers for ease of viewing.

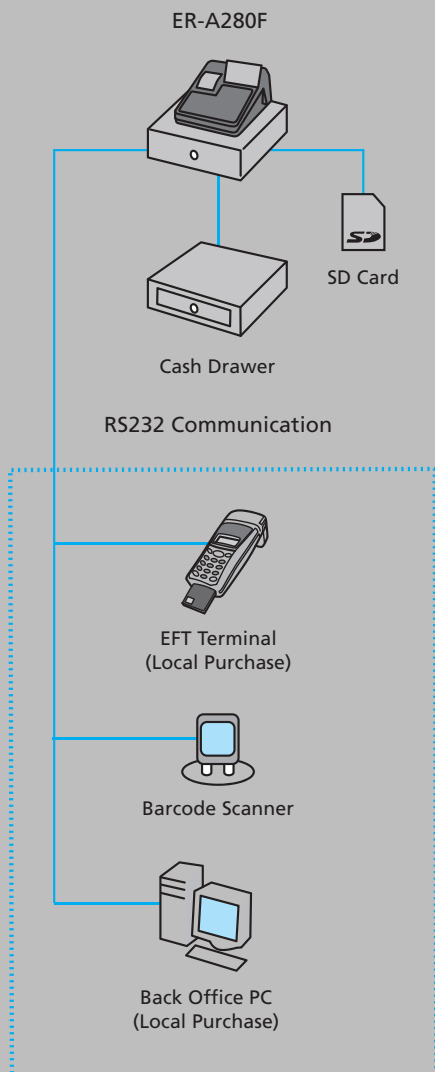

ER-A280F

KEYBOARD MANAGER

To help save time and react quickly to a changing menu or product set, the keyboard manager feature within the optional back office software allows users to customise the keyboard layout of their cash register from a computer and this can then be sent to various locations.

System Configuration

Note: Please consult your Sharp dealer about peripherals and PC software for PC connection.
